The Gentle Nudge

"Have you ever walked away from a situation, wishing you had acted better? Or felt a wave of stress, with no one to talk to? What if you had a gentle voice to guide you, not just on what's right, but on what's good for you?"

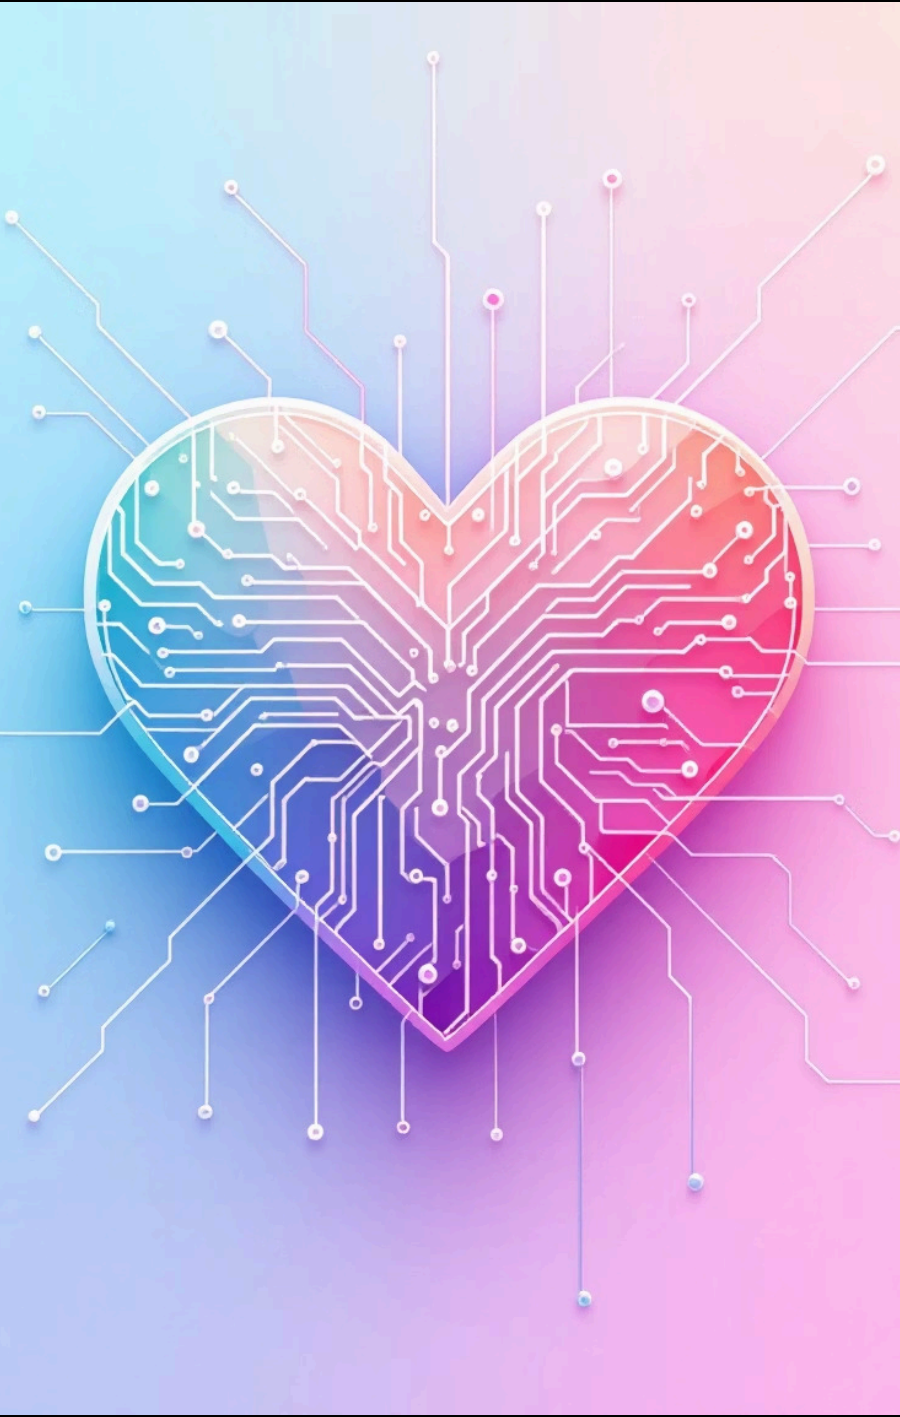

The Dual Crisis: Disconnect and Erosion

Erosion of Civic Sense

- Daily acts of incivility: littering and traffic chaos.
- Lack of courtesy in public spaces.
- Traditional reminders (posters, fines) are often ineffective.

Silent Mental Epidemic

- Increasing feelings of loneliness, stress, and anxiety.
- Feeling alone despite constant digital connection.
- Difficulty finding an immediate, judgment-free confidant.

A Companion for Conscience

Our Vision: Technology with Feeling

We asked a simple question: What if technology could **feel**? What if it could be a companion for your conscience and your mind? This is 'Mann Ki Awaaz'—The Virtual Guide Within You.

1

Empathy

2

Guidance

3

Mindfulness

Mann Ki Awaaz: Real-Time Transformation

Our discreet, AI-powered wearable seamlessly integrates into your daily life, providing real-time guidance exactly when you need it.

As Your Civic Guide

The camera sees the world as you do. If you're about to litter, a calm voice suggests: **'Let's find a bin to keep our city beautiful.'** It's a gentle, real-time nudge toward better civic behavior.

As Your Mental Companion

When feeling low or stressed, just talk to it. The advanced AI offers empathetic listening, supportive conversation, or suggests a simple breathing exercise. It's your 24/7, judgment-free confidant.

The Technology: Intelligent and Compassionate

Core Platform

Built around a powerful, low-energy **Raspberry Pi** for processing and context awareness.

Discreet Audio

Utilizes **bone-conduction audio** so the guidance is private, without blocking external sounds.

Real-Time Vision

An integrated camera allows the system to **see and understand** environmental context (e.g., traffic, trash can location).

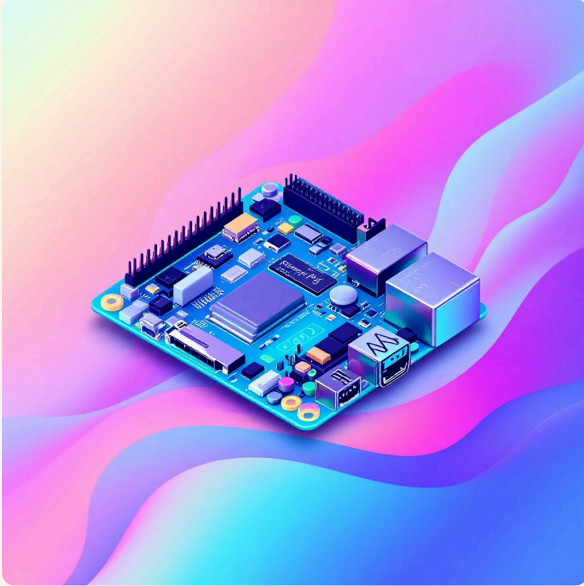

Advanced AI

The magic lies in an AI that understands **context and emotion**, providing intelligent and compassionate advice.

Core Components Used:-

Raspberry Pi 5

The brain of the "Mann Ki Awaaz" - The Virtual Guide Within You

Bone Conduction Technology

Used for taking in the input and producing the output.

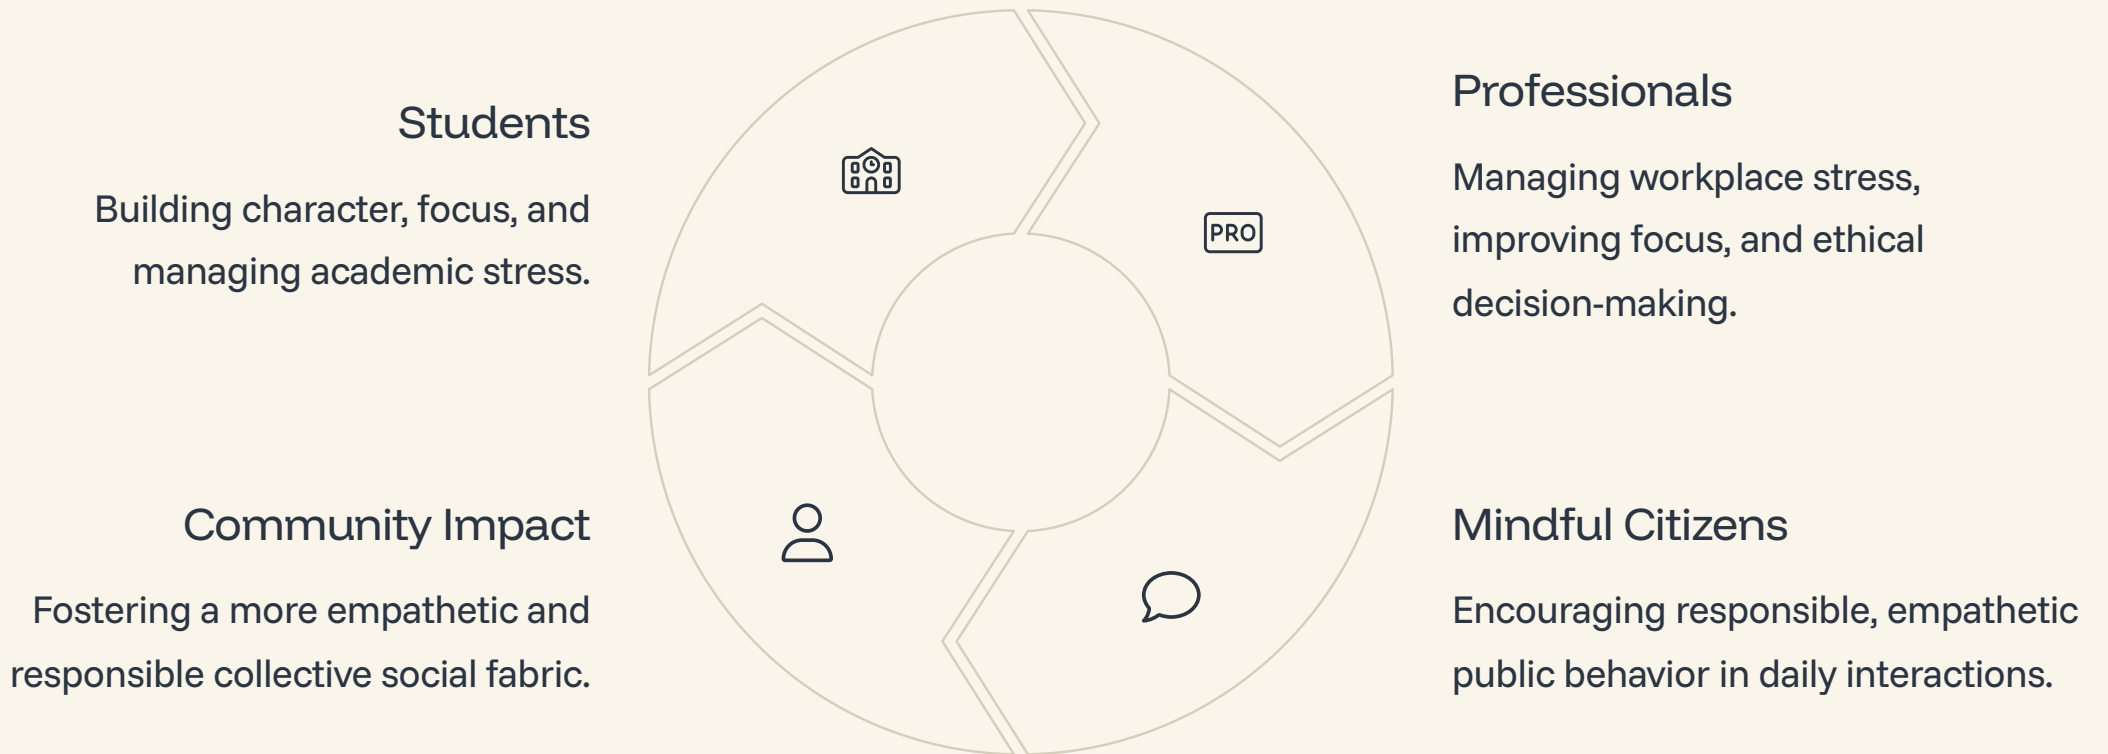

Raspberry PiCam

Used to observe the surrounding and respond accordingly with the help of LLMs.

Planting Seeds for a Better Society

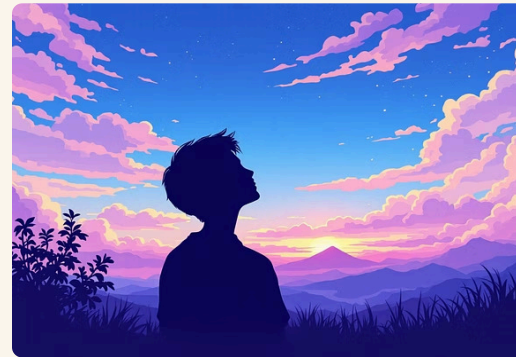

The impact of 'Mann Ki Awaaz' spans across demographics, helping individuals thrive and communities flourish.

A Voice to Care

Join the Movement

With 'Mann Ki Awaaz', we give technology a heart. We give it a voice. Not to command, but to care. This innovation invites us to become better versions of ourselves.

"Thank you. Join us in building a future where technology doesn't just think for us—it helps us become better versions of ourselves."
